# FERMENTAB

---

## The Green Alternative to Animal Protein Sources

### What is Fermentab

Fermentab is an all-natural, specially formulated product for soybean meal fermentation. It consists of approved probiotics such as *Bacillus subtilis*, *Lactobacillus* and etc...

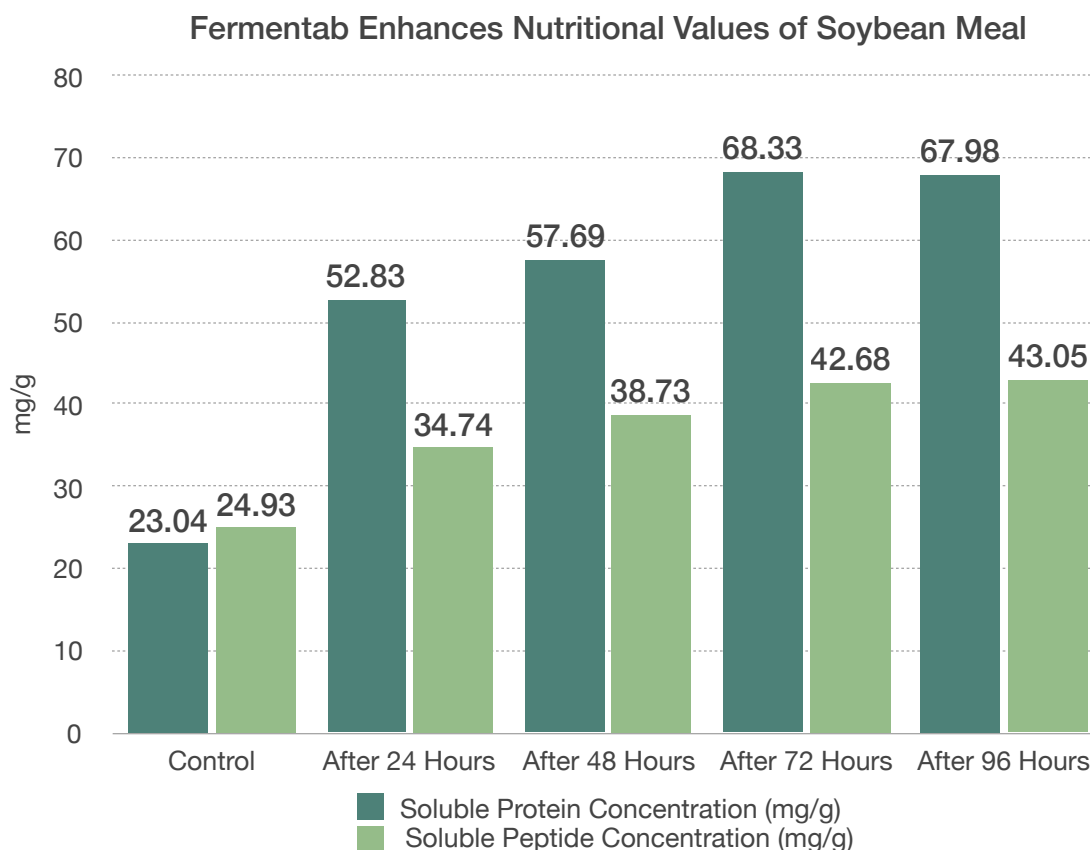

### Which Fermentab Benefits are Important

- Enhances the nutritional values of soybean meal, which is a more economical and safer alternative to animal protein sources
- Drying is not required, which means the resulting fermented soybean meal contains live probiotics and is ready for feeding immediately after fermentation
- Fermentation only takes 24 - 48 hours
- Easy and safe to use

## How to Use Fermentab

Add 1 tablet (2g) of Fermentab for every 200kg of soybean meal

## Experimental Data

The SDS fingerprint indicates that:

- The six anti-nutritional factors (ANF's) commonly found in soybean meal were effectively degraded after fermentation for 24 hours, based on the fading of the numbered bands
- Macromolecular proteins were degraded into smaller molecules, based on the fuzzy area between 17 - 26 kDa
