
PROGREEN-FA

The Green Feed Additive, Ideal for All Feeding Periods

What is Progreen-FA

Progreen-FA is an all-natural feed additive that is free of chemicals and toxins and ideal for all feeding periods. It serves to resolve issues such as poor feed efficiency, foul odour, flies and unsanitary eggs.

Why Choose Progreen-FA

- Probiotics secrete enzymes that promote degradation of macromolecules, such as carbohydrates, lipids, NSP's, proteins and etc...
- Probiotics inhibit the growth of harmful intestinal flora, such as *Escherichia coli*, *Salmonella* and etc...
- Probiotics that are excreted degrade nitrogen- and sulphur-containing materials in excreta

Which Progreen-FA Benefits are Important

- Improves metabolizable energy of feeds and feed utilization, which in turn reduces feed costs
- Reduces colloidal excrements and diarrhea occurrences
- Reduces the content of harmful gases in barns
- Easy and safe to use
- Can be used in all feeding periods

How to Use Progreen-FA

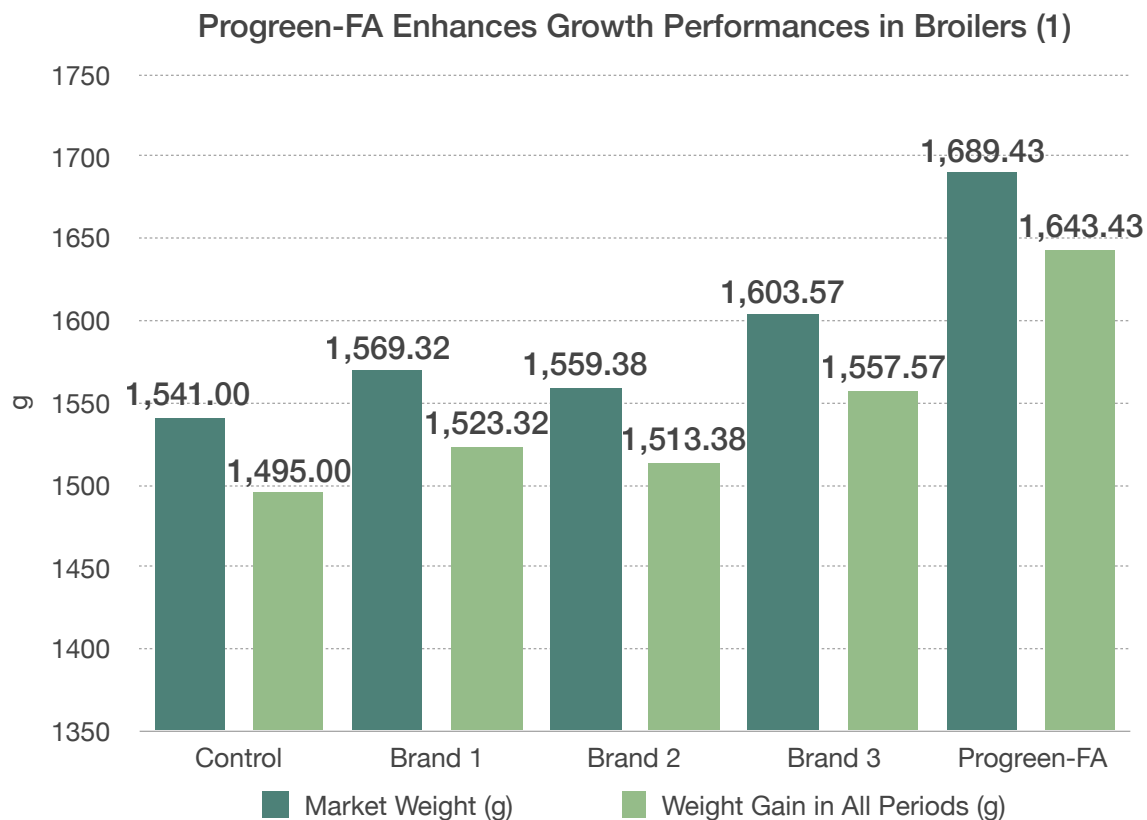

Normal Use

- Add 0.5kg of Progreen-FA per 1 ton of feeds

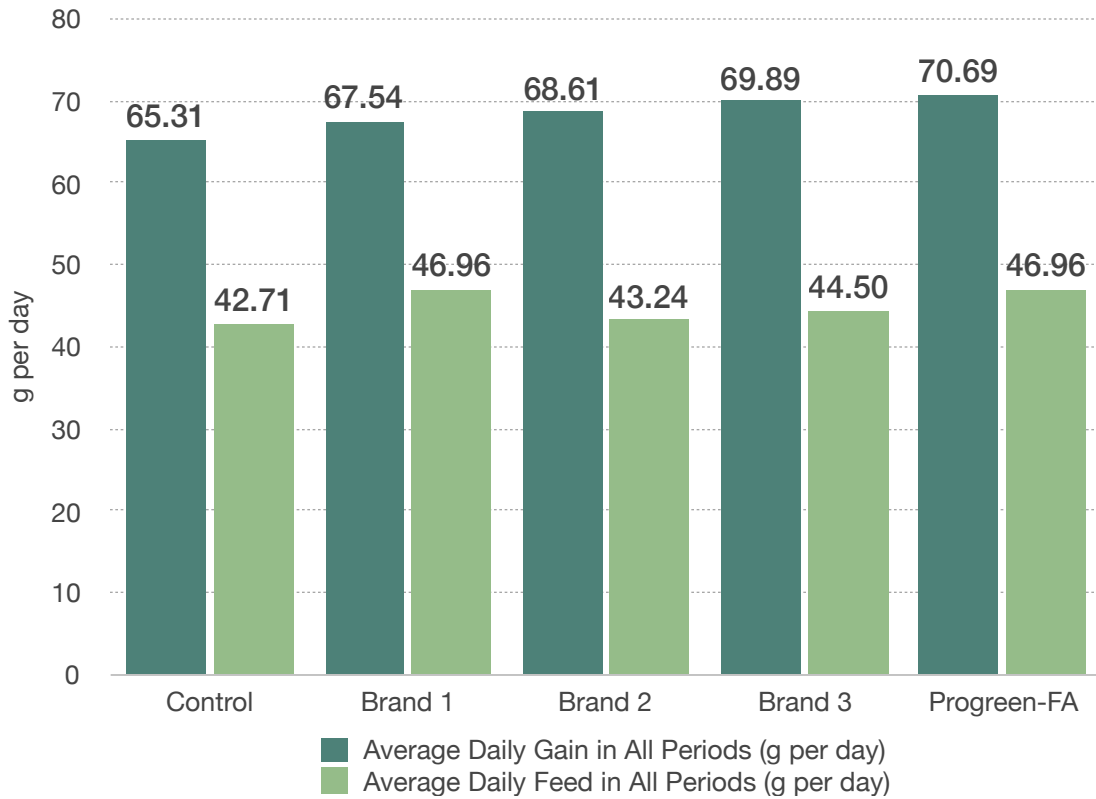

Immediate Results

- Add 1kg of Progreen-FA per 1 ton of feeds

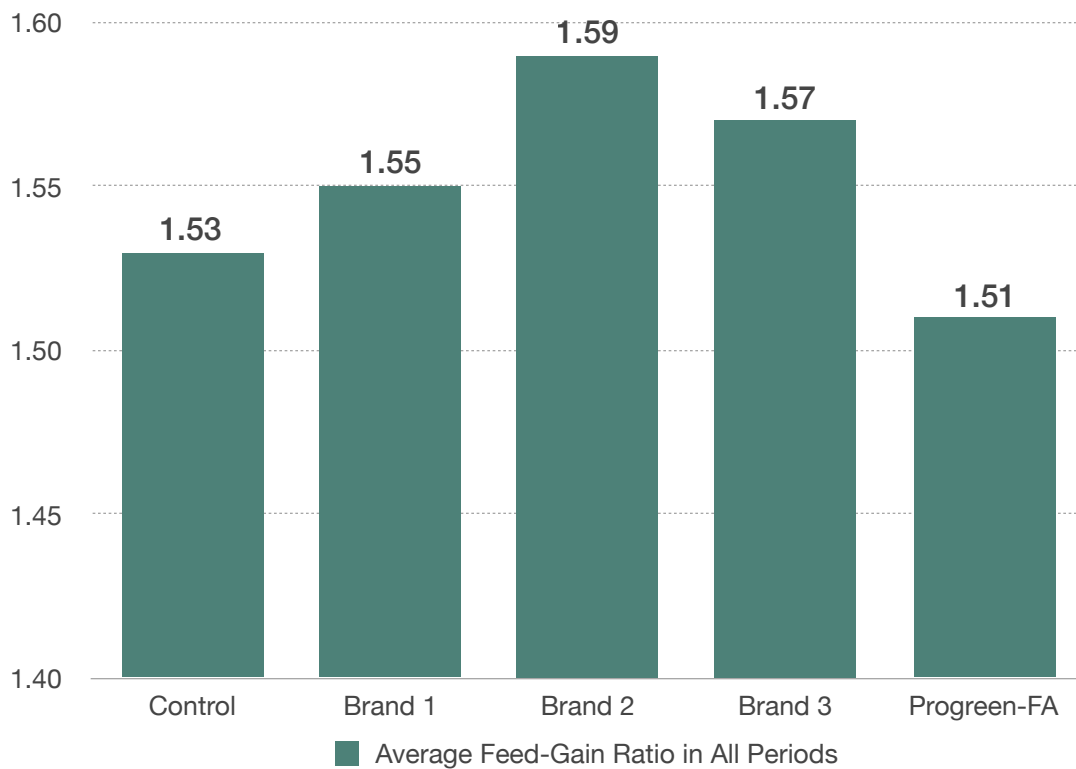

Experimental Data

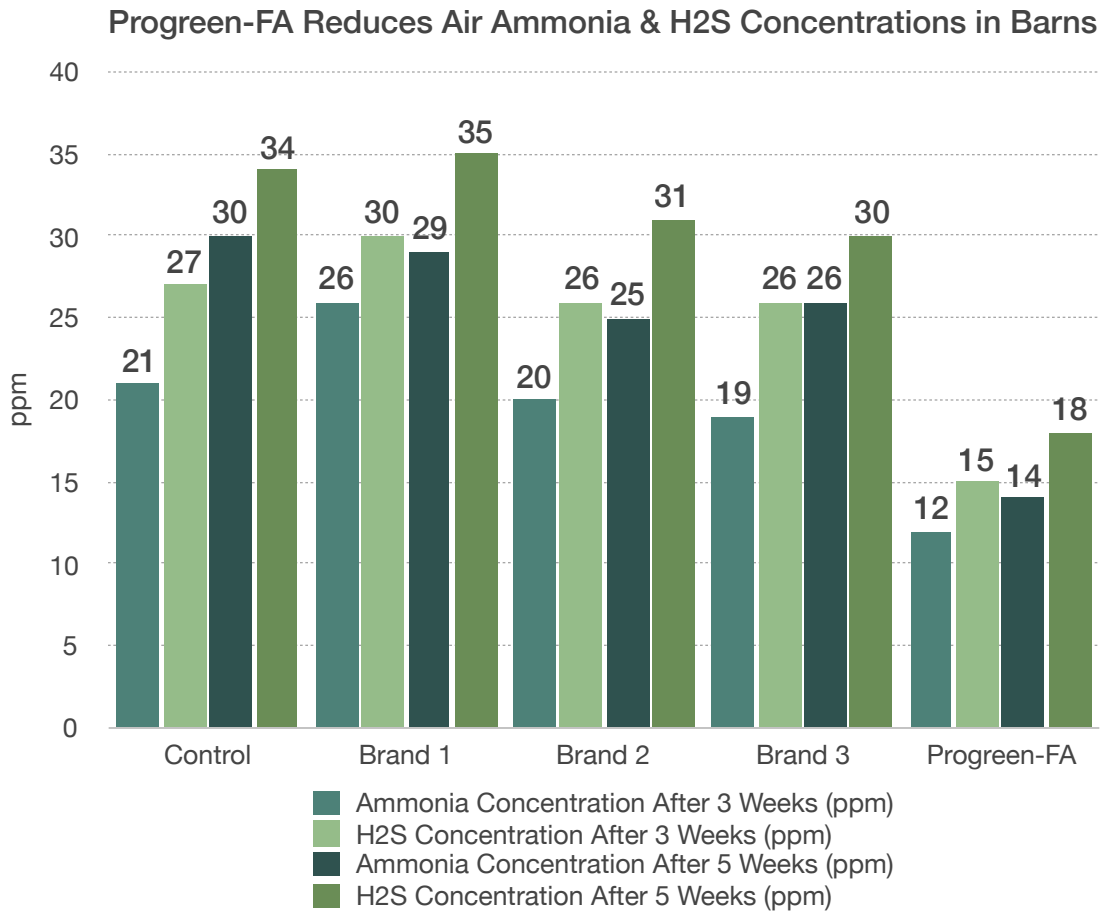

Progreen-FA Enhances Growth Performances in Broilers (2)

Progreen-FA Enhances Feed Utilization

Tests were conducted on our research broiler farms. The objective is to compare the feeding performances using Progreen-FA versus other commercial products. Because the feeds used in our tests were prepared using raw materials from our research & development department, it is expected that the feeding performances would be poorer than those using commercial feeds.

Farm A:

	Day 0	After 1 Week	After 2 Weeks	After 3 Weeks	Reducing Percentage
Percentage of Dirty Eggs	4.85%	4.37%	2.98%	2.62%	46.19%
Number of Flies Trapped	695			341	50.94%

Farm B:

	Day 0	After 1 Week	After 2 Weeks	After 3 Weeks	Reducing Percentage
Percentage of Dirty Eggs	5.21%	4.64%	3.72%	3.10%	40.50%
Number of Flies Trapped	727			384	47.18%

Summary of our findings:

- In broilers, Progreen-FA enhances market weights, average daily gains and feed efficiencies by 9.60%, 9.95% and 1.30%, respectively
- In finishing-period broilers, Progreen-FA reduces NH₃ and H₂S in barns by 44.4% and 47.1%, respectively
- In traditional layer farms, after only three weeks of using Progreen-FA, the number of flies and the number of dirty eggs are reduced by 40%
